## Software Development Engineer | .NET & Backend Architecture

Results-oriented Software Engineer taking end-to-end ownership of enterprise-grade financial systems, with deep expertise in **C#, ASP.NET Web APIs, and MS SQL Server**. Proven track record of designing scalable RESTful backends, writing highly optimized database queries, and securing applications via **AWS Secrets Manager**. Passionate about writing clean, maintainable code backed by **SOLID and OOP principles**, while leveraging containerization (Docker) to deliver robust solutions in fast-paced Agile environments.

## Professional Experience

### Software Development Engineer

July 2025 – Present

*IHS Markit (S&P Global) – ClearPar / Loan Platforms*

*Gurugram, India*

- Spearheaded the modernization of a legacy enterprise architecture, designing secure and scalable **ASP.NET Web APIs in C#** to power a modern React frontend while strictly enforcing **SOLID** and **OOP** design patterns.
- Integrated **AWS Secrets Manager** and applied robust **SQL Server** encryption protocols to safeguard sensitive configuration data across lower and production environments, ensuring compliance with strict security standards.
- Overhauled data access layers by tuning complex **MS SQL Server stored procedures** and optimizing **Entity Framework** queries, successfully combining this with in-memory caching to drastically reduce API response times.
- Engineered robust **RESTful APIs** with complete **Swagger** documentation for seamless cross-team consumption, and consistently championed high code quality through rigorous peer reviews.
- Diagnosed and resolved elusive, intermittent production defects by performing deep-dive log analysis via **Splunk**, ensuring highly reliable system availability during critical business hours.
- Built dedicated Regression Automation APIs to eliminate QA dependencies on manual database scripts, and architected containerized, event-driven pipelines using **Docker** and **AWS SQS** for reliable asynchronous processing.

## Technical Expertise

**Languages:** C#, SQL, Python, C++, TypeScript, JavaScript, HTML5/CSS3

**Backend & Frameworks:** ASP.NET Web API, .NET Framework, Entity Framework, ADO.NET, LINQ, MVC

**Databases & Storage:** MS SQL Server (Queries, Stored Procedures), Redis (Caching), Elasticsearch

**Architecture & Concepts:** RESTful APIs, OOP, SOLID Principles, Agile/Scrum

**Cloud, DevOps & Tools:** Docker, AWS (Secrets Manager, SQS, S3), Git, Visual Studio, Swagger, Confluence

## Selected Engineering Projects

### High-Performance Finance Components | C++, Linux, Multi-threading

- Developed an ultra-low-latency asset transfer core in **C++** on **Linux**, successfully eliminating race conditions and ensuring strict **transactional integrity** across concurrent execution paths.
- Implemented custom memory pools and multi-threaded processing patterns, reducing CPU consumption by **25%** and maintaining system stability during high-load stress testing of **50,000+** simulated trade inputs.

### CareerZenith Backend Architecture | Microservices, Python, React, CI/CD

- Architected a scalable backend ecosystem handling **10,000+** daily API requests via decoupled RESTful microservices, serving data to a fluid React frontend.
- Engineered a high-speed semantic search system utilizing a customized BERT Tokenizer and Fuzzy Logic, improving matching precision by **38%**.
- Established an automated **CI/CD pipeline** using **GitHub Actions** and **Docker**, ensuring zero-downtime deployments and reducing release cycles by **50%**.

### Distributed Log Analyzer | Python, Kafka, NoSQL

- Designed and deployed a real-time log ingestion pipeline using **Kafka** and Python, reliably handling data stream velocities of up to **500 MB/min** across decentralized infrastructure nodes.
- Optimized log store indexing schemas within a **NoSQL** layer, decreasing search time for critical server warning metrics by **70%** and accelerating production root-cause analysis by over **3 hours per incident**.

## Education

### Lovely Professional University

Phagwara, Punjab

*B.Tech in Computer Science and Engineering (CGPA: 8.04 / 10)*

*Aug 2021 – Aug 2025*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Design, Database Management Systems, System Design, Operating Systems.
